DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 4/7/2010 has been entered.

Election/Restrictions

2. Applicant's election with traverse of the restriction requirement in the reply filed on 2/12/2010 is acknowledged. The traversal is on the ground(s) that examining all of the claims would not impose a serious burden. This is not found persuasive because while there may or may not be overlapping searches and common elements for each of the defined inventions, the divergent subject matter contained in the nonelected groups or inventions would warrant significant additional consideration if addressed on the merits. Additionally, the Examiner remains of the position that the inventions as defined in the previous restriction requirement comprise distinct and independent inventions as discussed in the previous Office Action.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Haaker (US Patent No. 4,221,516)

Hasker discloses an assist transportation method and device for reducing a load applied to a worker when the worker operates transportation means to transport a product, comprising:

- A motor for performing assist driving (201);
- A holding means for holding the product (tong means);
- A floating mechanism corresponding to a connection portion between the holding means and the transportation means (See Figures 49 and 49A);
- A displacement detection means for detecting a displacement value of the floating mechanism (See Column 16, lines 25-68 – Column 17, lines 1-9);
- Control means for computing a reaction force using the detected displacement value, a subtraction force by subtracting the reaction force from an assisted driving force generated by the motor, wherein the control means communicates the subtraction force to the operator who operates the transportation means through the motor (See Column 16, lines 25-68 – Column 17, lines 1-9).

Response to Arguments

5. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
